

# 6421 Caja de Oro™ – RPC for Bananas

IFCO's Caja de Oro ("Box of Gold") is a reusable plastic container (RPC) for the transport packaging of high-quality bananas. Through its innovative design, the RPC delivers superior quality bananas and creates supply chain efficiencies, providing golden ripe bananas to retail displays.

In a comprehensive commercial trial program in 2010, IFCO's banana RPC proved its superior performance. 85 % of produce managers surveyed stated their preference for the RPC over the corrugated box for bananas. 75 % believe the RPC saves time, and 80 % agree that the RPC is easier to handle than the corrugated box.

## High-quality bananas

- Greater protection of bananas through the supply chain
- Improved cooling and temperature management for fresher product
- Better appearance and marketability on display

## Efficient handling and distribution

- Eliminates box failures caused by compression and corrugated instability
- Provides better ventilation and temperature control at stores, reducing air-stacking requirements
- Reduces shrink, saves time and labor
- Strong pallet for better distribution and cube utilization

- Easier, more ergonomic handling from farm to stores

## Environmentally friendly packaging

- Designed for years of reuse
- Reduces corrugated waste, energy consumption, and greenhouse gas emissions
- IFCO is committed to Worldwide Responsibility

# 6421 CAJA DE ORO™ – RPC FOR BANANAS

## ✓ Stable Locking

Special clips for secure latching

## ✓ Stacking Rim

Smooth rim facilitates stacking and unstacking

## ✓ Superior Technology

Water-injection manufacturing technology for superior strength and stability

## ✓ Optimum Protection

Interior side walls are curved and smooth to cradle and protect bananas

## ✓ Easy Handling

Ergonomic handle for easy lifting

## ✓ Pallet Stability

Thick 1 cm stacking rim nests deep for added pallet stability

## ✓ Excellent Ventilation

Ventilation designed for optimum performance in airflow, cooling, and temperature control
